

PTCS

Proton Therapy Center Switzerland AG

6 Why is this hospital being built in a community nearby the Lake of Lucerne?

There are many advantages to the site in this community in the Canton of Schwyz. This site makes it easier to collaborate with all the cooperation partners in the field of cancer therapy and radiation therapy. We may mention here the discussions about sites for top level medicine, which have sometimes been bitter. The political support from the Canton of Schwyz and from this community nearby the Lake of Lucerne as well as the availability of land are further advantages of this site. Transport facilities which makes it easy to travel to Zürich, Central Switzerland and Eastern Switzerland are very good. There is also the possibility of cooperating with a community hospital nearby.
