

PTCS

Proton Therapy Center Switzerland AG

14 How much additional traffic will arise?

At full capacity, 144 patients will receive radiation therapy every working day. If we assume that 80 of these 144 will stay in the center hotel, we reckon on 64 patients journeys a day. In addition to this, there will also be staff who eventually will total about 200 people, including the hotel. Training or school participants will usually stay in the education center or in the hotel for several days. Assuming that some staff will live in the immediate neighbourhood, we assume that there will be about 400 people travelling each day, once the final stage has been reached.
